About Us

Early in 2002, the Ganmain & District Landcare Group commenced the "Restoration Of Ganmain's Forests, Wetlands And Wildlife Corridor Project". The project aimed to provide habitat areas for threatened and declining species of flora and fauna through the revegetation of forests and wetlands and the creation of a corridor that would join Ganmain's forests.

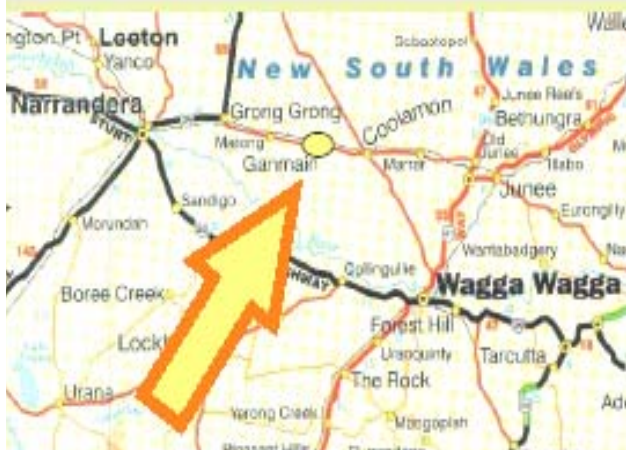

Over the next three years, the Ganmain & District Landcare Group worked to create wildlife corridors between two significant areas of remnant vegetation - the Ganmain State Forest situated approximately 10 km North West of Ganmain and the forest on the edge of the Ganmain township. Both sites are known to provide excellent diversity of flora and fauna species.

Some of the problems addressed included the removal of African Box Thorn and Prickly Pear that were seriously threatening the natural environment. Rubbish and scrap that had accumulated over almost 90 years was removed; the walkway was rejuvenated and research and surveying was performed. The areas were then ripped and mulched and approximately 20,000 locally native seedlings were planted.

The Restoration of Ganmain's Forests, Wetlands And Wildlife Corridor Project occurred with the assistance of The Environmental Trust and Conservation Volunteers Australia.

Where are we?

This walk provides examples of the environmental restoration and rehabilitation project that has been undertaken in and around Ganmain. This project was achieved through a partnership between the Ganmain & District Landcare Group, the Environmental Trust, Conservation Volunteers Australia & Coolamon Shire Council.
